

TOP TIPPS FOR YOUR MAGURA BRAKES

MOUNTING / MAINTENANCE / SAFETY

1. BEDDING-IN BRAKE PADS

PRIOR TO YOUR FIRST RIDE

- Degrease disc brake rotor using brake cleaner or spirits
- Make familiar with higher braking action of Magura MT brakes
- Start bedding-in brake pads, to develop final braking force & to reduce the likelihood of squeaking

- ☞ Accelerate bicycle to about 30 km/h (20 mph).
- ☞ Brake bicycle to a stop.
- ☞ Repeat 30 to 50 times.

2. CHECKING THE BRAKE PAD

Transport securing device = wear indicator

Always use transport devices for transport with wheels removed!

3. DIFFERENT TYPES OF BRAKE PADS

Comfort / for riders who want control rather than bite + a long-lasting product

Performance / offer safety for long tours + excellent performance in all situations

Race* / for those who bring their material to the limits – only for experienced riders

→ Switching to a different brake pad can influence the pressure point and braking feeling of your brake!

After a certain period of time the bedding in procedure, as shown in point 1, can be repeated

→ Helps reduce noise after a longer period without hard braking
